Students and Faculty gathered in a packed lecture hall at the New York College of Podiatric Medicine this past Friday to hear a special guest lecture by John E. Anderson, MD, President, Medicine & Science, of the American Diabetes Association. Dr. Anderson’s lecture was titled “Management of Hypoglycemia in Type 2 Diabetes: A Patient-Centered Approach”. Beginning by citing the alarming statistics on the growing worldwide incidence of diabetes, Dr. Anderson then reviewed recent ADA/EASD Consensus Panel Treatment recommendations. In his discussion of the patient-centered approach to the management of hypoglycemia in Type 2 diabetes, he stressed that glycemic targets and blood glucose-lowering therapies must be individualized, with diet, exercise, and education the foundation of any therapy program. Following Dr. Anderson’s lecture, there was a robust Q+A session that brought out additional aspects of the patient-centered approach, and that expanded on the role of podiatric care as part of a team approach to the care of patients with diabetes.
