## Entire College Attends Endovascular Symposium at ISMMS

The entire pre-clinical and clinical faculty and student body of the New York College of Podiatric Medicine attended the Endovascular Symposium, which is part of the 18th Annual Complex Coronary Valvular and Vascular Cases Symposium sponsored by the Icahn School of Medicine at Mt. Sinai, on June 18, 2015 in New York City. Experts from around the world spoke about state-of-the-art endovascular techniques used to restore circulation to the lower extremity. The endovascular section was chaired by Prakash Krishnan, MD, who is a renowned interventional cardiologist specializing in peripheral arterial disease at Mount Sinai, director of the lab there, and who also consults for the Foot Center of New York. Highlights of the meeting included live cases from the cath lab at Mt. Sinai, as well as from University Hospital in Leipzig, Germany and from the Wellmont CVA Heart Institute in Kingsport, TN. NYCPM's VP for Academic Affairs and Dean, Michael J. Trepal, DPM, delivered a talk on the role of Podiatric Medicine in the detection of Peripheral Arterial Disease.
